# Structure of the Creator's Editor

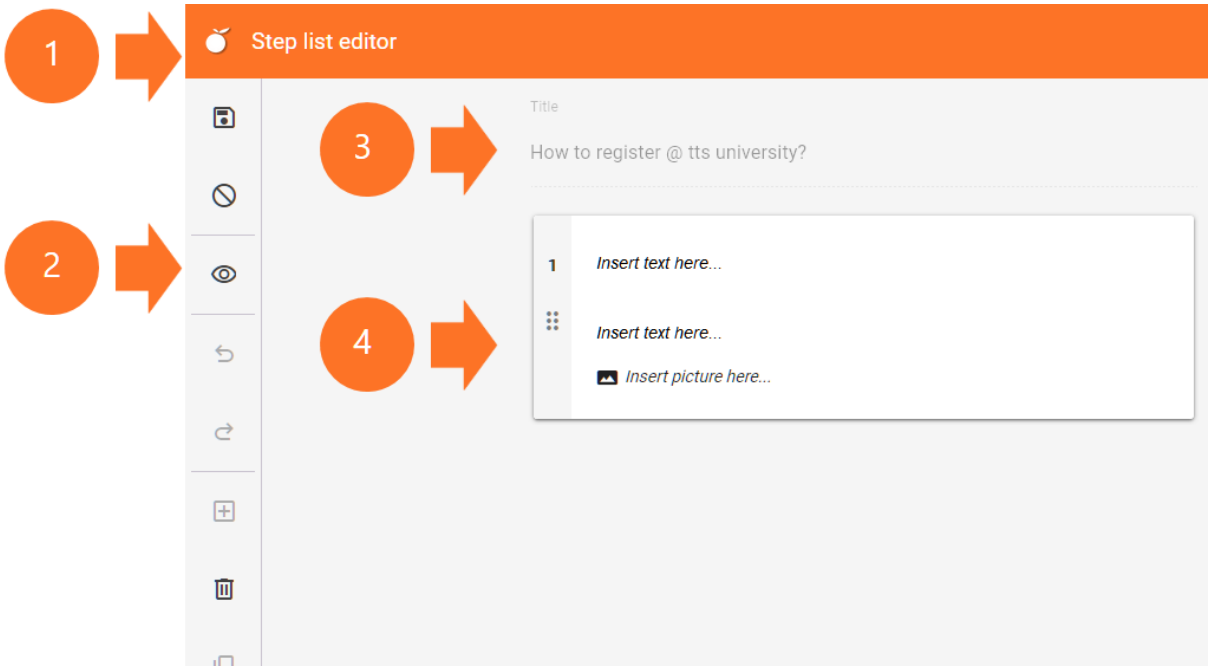
This document will familiarize you with the basic structure of the Creator's Editor.

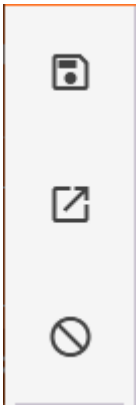
The Creator's Editor supports the creation and editing of a Creator document. The finished document will also be saved in the Curator via the Creator's Editor.



The Steplist Editor is structured in the following manner:

1. Title bar
2. Sidebar
3. Document properties
4. Document content

The top three buttons in the sidebar provide access to the basic functions of the Editor. The functions are described below:



- Save the document and close the Editor.
- Open the Editor in a separate window instead of in a pop-up (in front of the Curator), e.g. to retain access to the Curator or other documents.
- Discard all changes to the document (!) and close the Editor.
