

# Barrier-free tutorial control

You have the option of operating the tutorial control in a barrier-free manner. Keep reading to find out how.

Users can also control an e-learning via the keyboard. As soon as the **Alt Gr** key is pressed, little flags that display the keyboard shortcut for executing the corresponding function will appear next to the buttons on the Comment window.

- 💡 As an alternative to **Alt Gr**, you can also use the **Ctrl** + **Alt** key combination.
- ✎ If it becomes necessary to press the "Alt Gr" key or the **Ctrl** + **Alt** key combination to perform the page interaction (e.g. to enter the "@" sign), the flags will not be displayed.
