Creator 2.x.x to 3.x.x Migration Guide - tts performance suite 2025r2

.....

Contents

1	Migrate from 2.x.x to 3.x.x	3
1.1	Tomcat 10.1 Requirement	3
1.1.1	TTSPS 24.1	3
1.1.2	TTSPS 24.0 and older	3
1.2	Other behavior changes	3

1 Migrate from 2.x.x to 3.x.x

1.1 Tomcat 10.1 Requirement

Creator 3.x.x upgrades its Spring Boot and Spring dependencies to 3.x.x and 6.x.x. They require at least Tomcat 10.1 to run.

1.1.1 TTSPS 24.1

Curator and WebAccess already require a Tomcat 10.1. You can deploy the Creator 3.x.x on the same Tomcat 10.1 inside the webapps directory. Do not deploy the Creator 3.x.x inside the webapps-javaee directory.

1.1.2 TTSPS 24.0 and older

Curator and WebAccess require a Tomcat 9. The Creator 3.x.x is not able to run on Tomcat 9, and Curator and WebAccess are not able to run on Tomcat 10.1 (not even inside the webapps-javaee directory). To use the Creator 3.x.x you need to deploy it on a separate Tomcat 10.1.

1.2 Other behavior changes

Some behavior changed with the upgrade to Spring Boot 3.x.x and Spring 6.x.x

- The healthcheck now returns `{"status":"UP"}` instead of `{"status":{"status":"UP"}}`.
- Unknown requests or requests with missing parameters return status code 403 Forbidden instead of 400 Bad Request.
