

Landing page of the portal

A landing page is a page in WebAccess that is accessed via a portal link. A landing page is provided when a Producer document with several export formats is accessed via a portal link.

The landing page gives learners the opportunity to select the learning format that best suits their needs. In the example shown here, the E-learning and Documentation export formats are available. All other formats can be found in the help document titled "Publishing options for a Producer document". The formats can be set in the properties of the Document Editor in the Producer.
