1 Migrate from 1.x.x to 2.x.x

Upgrading from Creator 1.x.x to 2.x.x requires some configuration changes.

1.1 Required changes in curator application-config.properties

1.1.1 Update ttkf.server.businessguidancecreator.endpoint

The required value for `ttkf.server.businessguidancecreator.endpoint` depends on the combination of the Curator and Creator version:

Curator version	Creator version	<code>ttkf.server.businessguidancecreator.endpoint</code>
2022	1.x.x	<code>https://<creator-domain>:<port>/creator/v1/session/open</code>
2022	2.x.x	<code>https://<creator-domain>:<port>/creator/v1/session/open</code>
2022r2 or newer	1.x.x	COMBINATION NOT SUPPORTED
2022r2 or newer	2.x.x	<code>https://<creator-domain>:<port>/creator</code>

1.2 Required changes in creator application-config.properties

1.2.1 Replace creator.curator-address

`creator.curator-address` must be replaced with `creator.curator.internal-address` and `creator.curator.external-address`.

Old format	New format	Description
<code>creator.curator-address</code>	<code>creator.curator.internal-address</code>	Internal Curator address which is reachable from the Creator server
<code>creator.curator-address</code>	<code>creator.curator.external-address</code>	External Curator address which is reachable from a browser

1.2.2 Add creator.curator.version

`creator.curator.version` must contain the version of the Curator that is used together with the Creator, e.g. 22.0 or 22.1.

1.2.3 Add creator.templates.location

`creator.templates.location` must contain an absolute path to the directory that contains the Creator templates that were released together with the Creator .war file, e.g. `file://home/user/creator-templates`.
