

Keyboard shortcuts

Here you will find tables containing all the keyboard shortcuts that are supported by tts performance suite.

1 Keyboard shortcuts in the Local Workspace

Shortcut	Function
 + N	New document
 + O	Open selected document
	Open the User Preferences (settings)
 + D	Duplicate document
 + 	Access the properties of the selected document

2 Keyboard shortcuts in the Document Editor

General shortcuts	Function
	Access manual (Help)
 + S	Save
 + C	Copy
 + X	Cut
 + V	Paste
 + Z	Undo
 + Y	Redo
	Delete
 +  + G	Insert outline into Step list
 + 	Merge screenshot with previous one
 + 	Exit Document Editor
	Export documentation

 + G	Group objects / Ungroup
	Reload XML resources
 + 	Edit QuickAccess signatures
 + 	Open document properties
 + X	Insert textbox
 + T	Insert table
 + I	Insert image
 + C	Edit Comment and Feedback text
 +  + 	Delete reference
	Start Play mode
 + 	Play animation to check it

Text editing and formatting	Function
 +  + arrow key	Select text
 +  + F	Format selected text as bold
 +  + K	Format selected text as italics
 +  + U	Format selected text as underlined
 + L	Align left
 + E	Align centered
 + R	Align right
 + B	Justify
	Input text
 + F	Find (/Replace)
 + K	Insert hyperlink
 +  + V	Paste text from clipboard without formatting
 +  + -	Insert soft hyphen

The following editing rules apply in the documentation: The arrow keys can be used to move the cursor about freely within a textbox. However, it is not possible to exit a textbox via the arrow keys. To get the cursor to jump from one textbox to the next, use the **Ctrl** +  (arrow key that points up) or **Ctrl** +  (arrow key that points down) shortcut.

The Documentation view allows you to select several text modules (such as textboxes) with a click of the mouse. The procedure is the same as that for making a multiple selection in Windows – simply keep the **Ctrl** or the  (Shift) key pressed.

3 Navigation in tables

In **Tables**, the arrow keys (   ) can be used to jump to one of the adjacent cells. Furthermore, the Tab key  can be used to move the cursor to the respective next cell (the cell's content is then automatically selected). The  +  shortcut takes you back to the previous cell in the table and selects its content. If the cursor is positioned in the last column of the final row of a table, pressing the Tab key  again inserts a new row at the bottom of the table.

4 Managing lists

Shortcut	displays / switches list
Alt +  + S	Step list
Alt +  + T	Task list
Alt +  + M	Presentation objects (step)
Alt +  + O	All presentation objects
Alt +  + I	All interaction objects
Alt +  + N	Interactions
Alt +  + K	Page interaction objects
Alt +  + C	Console
Alt +  + H	Path Editor
Alt +  + E	Triggers
Alt +  + P	Properties view
Alt +  + R	All images

 +  + X	All texts
---	-----------

In the **Step list**, the Page Up and Page Down ( / ) keys can be used to navigate to the previous / next step. You can move to the first or last step by pressing the  or  key.

To move an **outline element** up a level, use the  +  +  shortcut. To move an outline element down a level, press  +  + .

5 Other shortcuts

If you press the Print key during a **recording**, an **additional screenshot** will be included in the documentation and in the e-learning. To record a **touch interaction**, use the  +  + # shortcut (it's possible to change this shortcut in the Recorder section of the User Preferences).

To **pause** an ongoing **recording**, press the Pause/Break key. To continue the recording, press the Pause/Break key again. This little trick can be very helpful because the focus then always remains on the window to be recorded and lists or menus remain open – all of which would not happen if you were to click the Pause button in the Recorder window. The User Preferences also allow you to define a shortcut via which you can end the recording (default setting:  +  + ).

During a manual **ReRecording**, you can have the tool carry out the next interaction by using the  + Pause/Break shortcut.

The following rules apply when moving objects via the keyboard:

- Press arrow key     : Moves an object by several (10) pixels.
- Simultaneously pressing  + arrow key: Moves an object 1 pixel.

To perform the page interaction in the simulation, press the  + A shortcut (**perform interaction**).
